

PAI Hybrid Consensus - September 2020

- PAI Hybrid Consensus is a **reengineering** of the consensus mechanism (the protocol that PAI Coin runs on).
- **Currently**, PAI Coin is uses a **Bitcoin-style Proof-of-Work (PoW)** consensus, which has certain security vulnerabilities, like the 51% attack.
- PAI Hybrid Consensus will combine Proof-of-Stake (PoS) consensus with PoW for **an ultra-secure solution**, allowing the network to be fully decentralized.
- **After this launches**, you will still be able to stake and mine with PCP, but you will also have to option of **solo mining** or **solo staking**.

PAI Hybrid Consensus - September 2020

- For existing PAI Coin holders, PAI Hybrid Consensus presents the opportunity to participate in the network and **earn additional coin** by staking.
- Stakers **work in conjunction with miners** to validate transactions.
- The Hybrid Consensus hard fork will occur in **September 2020**.

Timeline of Hybrid Consensus
